Video Solutions for Education

Intelligent IP Video Management

JDS video platform gives the user the ability to manage thousands of cameras from anywhere at anytime. Utilizing IP infrastructure to deliver select and secure video on demand has increase the usability and feasibility of IP Video. Today's world requires fast, efficient, and coordinated efforts when reacting to security events. From the principal reviewing a cafeteria incident from his office to the local law enforcement driving up on a crisis event and connecting via a wireless VPN network our software suite offers stable and reliable management tools to meet these growing demands.

Integrated, Distributed Control

JDS video platforms can utilize current or planned IT infrastructure to create a Central Command Center for complete control of hundreds of locations. Centralized or distributed recording, live view, and enhanced playback increases system reliability, control, and security.

Access from Everywhere

Selectable system access determines rights to view live video, recorded video or both. JDS offers tools such as;

Softsite ViewStation- A simple user application to view and manage all video feeds. Explicit user profiles limit what can be seen and reviewed by each user's login.

_Web Client- A Java based viewer similar to ViewStation without installing any applications. Web browser accessible with full reserving technology, allowing multiple users to view the same video feeds simultaneously without degradation.

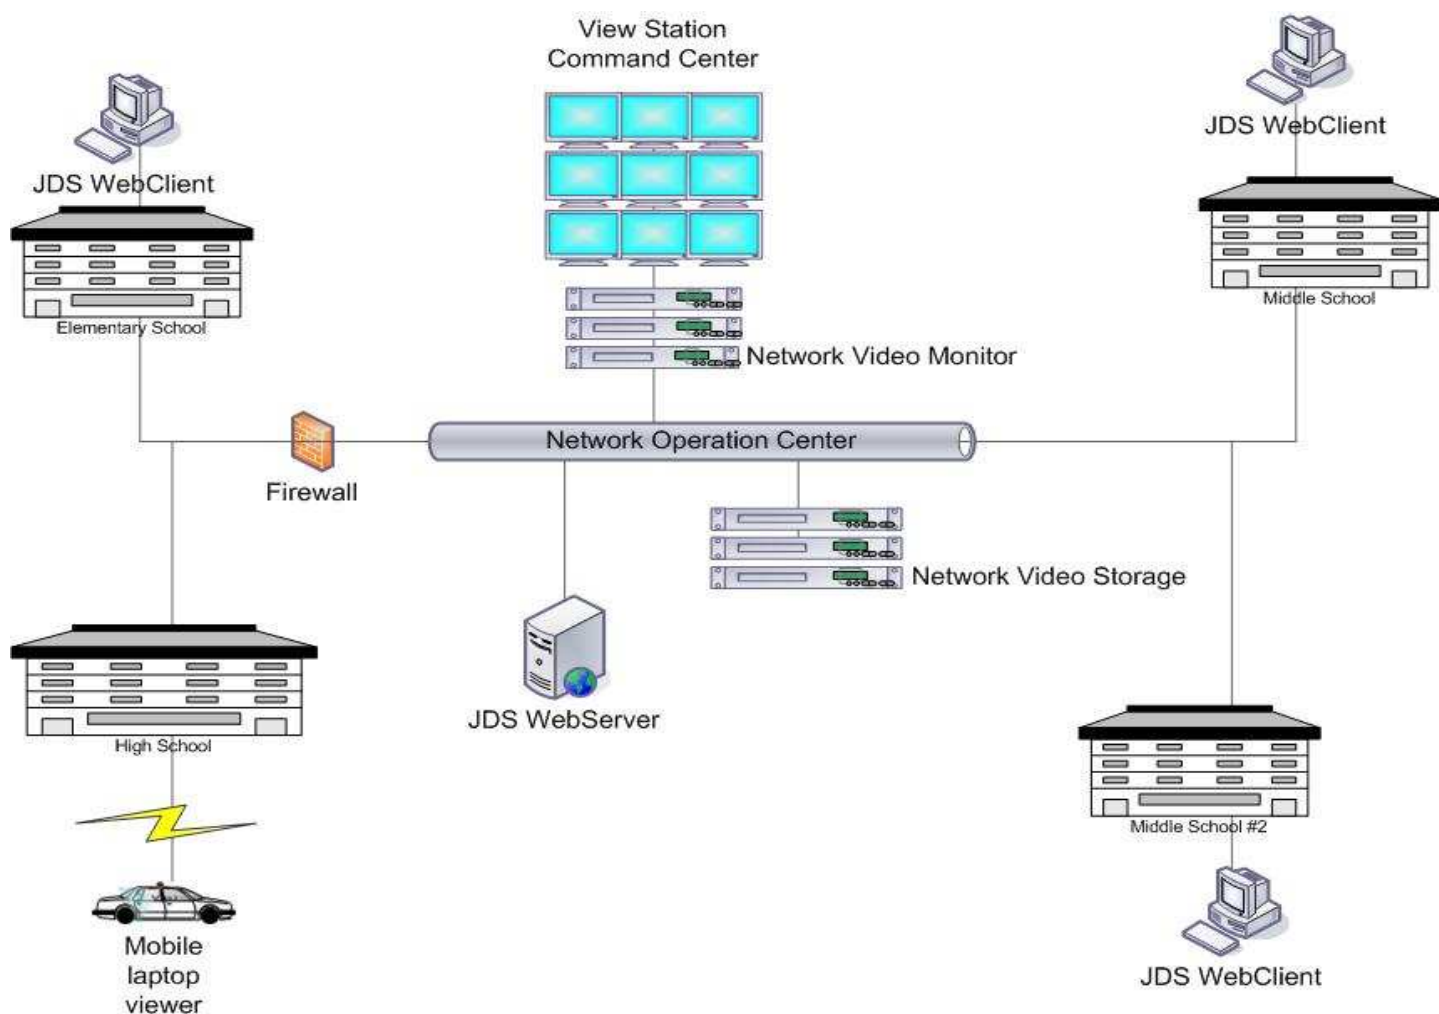

Software Designed for your Environment

JDS has spent many years refining our systems for targeted verticals. Our Academic systems have many components designed specifically for your needs. Assembling video clips for evidence, finding out 'what happened last night' and other tedious tasks have been reduced to a few simple mouse clicks. Information you need, available now.

Digital Security Systems

Academic Campus Architectural Overview

Quick Facts:

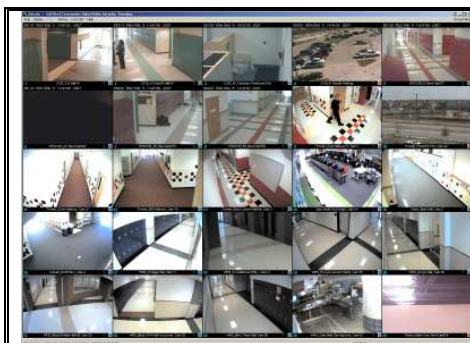

- Enterprise video has been successfully used to prosecute federal cases.
- Enterprise software is extremely reliable. Documented by the Federal BOP.
- Storage costs are greatly reduced with our patented Direct to Disk Design.
- Enterprise products ship with everything included. No add-ons or hidden costs.
- No seat licenses or per use fees. Once a camera is licensed, our software can be installed unlimited times.
- JDS owns all of the technology used. Customization and integration are always viable options.

Digital Security Systems

Enterprise Family

Major Application Components

Enterprise

View, Record, Manage camera feeds.

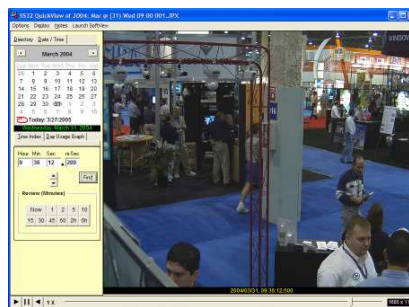

Area Scan

Intelligent search, locate movement in recorded archives.

Softview

View, Print, Copy, Convert to AVI and JPEG frames.

Quick View

Instant archive retrieval of 'Now'. Find any video frame instantly.

Softview DVE

Edit sequences together. Synchronized playback and Conversion to AVI.

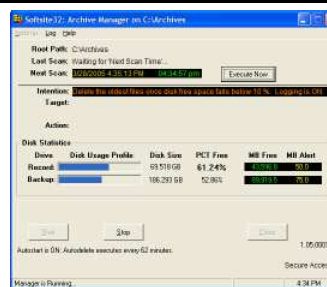

View Station

Monitor live video and review archives from any workstation with minimal training. JAVA version available.

JPX Monitor

Archive activity watchdog with email and console alerting.

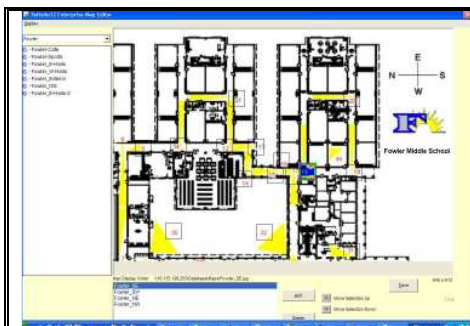

Archive Manager

Purges old archives. Can also backup to other storage media.

Digital Security Systems

Enterprise Family Major Application Components

Map Editor

Bind Maps to camera icon hotspots.

ActiveX Web Client

Selective View, Playback and Manage camera feeds. Map Interfaced.

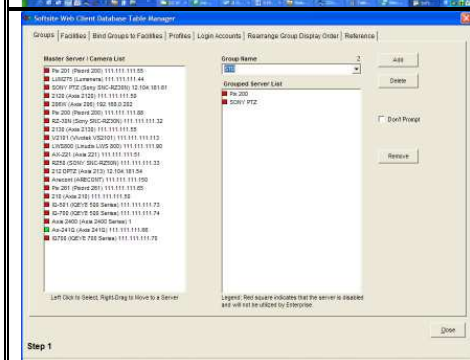

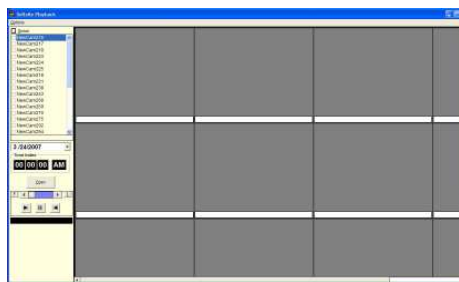

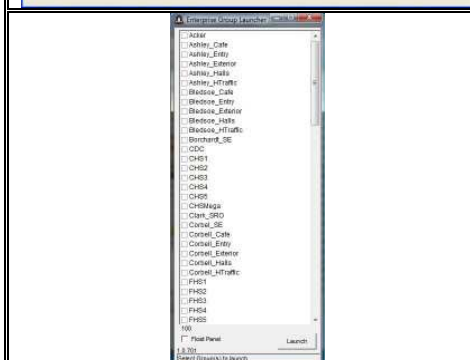

Table Manager

Assigns user login profiles and permissions. Build camera groupings.

Softsite Playback

Allows up to 16 cameras to be played back synchronized.

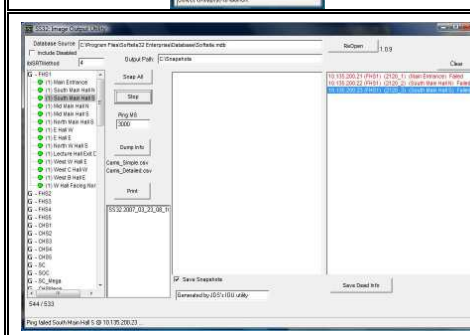

Group Launcher

A simple interface to launch multiple camera groups from a single menu list.

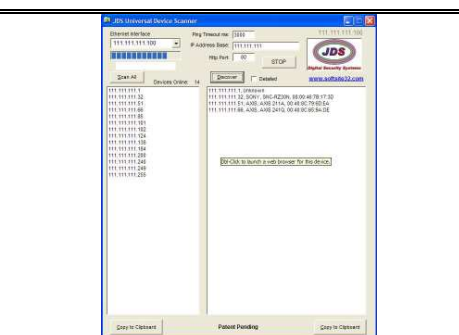

Group Tour

Multiple group arrays of cameras can be toured on limited display real estate.

IOU Image Output Utility

Allows one click archiving of every camera image in the system.

UDS Universal Device Scanner

Finds all devices from any supported manufacturer and identifies them.
